

ST. XAVIER'S COLLEGE (Autonomous), Ahmedabad

Reaccredited 'A+' (CGPA:3.27 out of 4) by NAAC (4th Cycle) | Affiliated to Gujarat University

Syllabus for

Self-financed

Master of Science (M.Sc.) – Analytical Chemistry

(With modifications upto 15th September, 2022)

Programme Specific Outcome

A student completing this program will be able to

PSO1: Knowledge: Apply the basic knowledge of inorganic, organic, physical and analytical chemistry, in the various fields of pharmaceutical sciences, environmental sciences, forensic sciences and biochemical analysis

PSO2: Laboratory skills: Apply various techniques for the qualitative and quantitative analyses based on instrumental and physico-chemical methods as well as apply the principles of synthetic organic chemistry for organic preparation.

PSO3: Environmental concern: Become aware about various kinds of environmental pollution and apply the principles of green chemistry in industrial and laboratory processes

PSO4: Employability/future prospects: Develop analytical and problem- solving skills as well as apply good laboratory practices necessary for performing various activities in the industry

PSO5: Scientific communication: To develop scientific *communication skills, thereby* the students are able to express ideas clearly and convincingly, in written and oral forms.

Table of Courses

Course	Course Name	Page No.
Code		
PCH-1851	Inorganic Chemistry I	4
PCH-1852	Organic Chemistry I	6
PCH-1853	Physical Chemistry I	9
PCH-1854	Analytical Chemistry I	11
PCH-1855L	Inorganic and Organic Chemistry Practicals I	13
PCH-1856L	Physical and Analytical Chemistry Practicals I	15
PCH-2851	Inorganic Chemistry II	17
PCH-2852	Organic Chemistry II	19
PCH-2853	Physical Chemistry II	22
PCH-2854	Analytical Chemistry II	24
PCH-2855L	Inorganic and Organic Chemistry Practicals II	26
PCH-2856L	Physical and Analytical Chemistry Practicals II	27
PCH-3851	Analytical Spectroscopy - I	29
PCH-3852	Electroanalytical Methods	31
PCH-3853	Industrial Analytical Chemistry	33
PCH-3854	Forensic Sciences	35
PCH-3855L	Industrial applications and titrimetric methods	37
PCH-3856L	Analytical Instrumental techniques	38
PCH-4851	Analytical Spectroscopy - II	39
PCH-4852	Pharmaceutical Chemistry 41	
PCH-4853	Advanced Analytical Instrumentation43	
PCH-4854	Environmental Chemistry 45	
PCH-4855L	Industrial and pharmaceutical chemistry 47	
PCH-4856L	Dissertation / Industrial Training48	

St. Xavier's College (Autonomous)

Ahmedabad-09 M.Sc. Analytical Chemistry

Semester: 1 Course Name: Inorganic Chemistry (Theory) No. of Credits: 04

Course Code:PCH-1851Learning Hours:60 Hours

Course Outcomes:

CO1: Apply the approximation methods in quantum theory to solve the Schrodinger wave equation for multielectronic atomic systems such as helium

CO2: Use molecular symmetry and group theory to simplify problems involving molecular properties

CO3: Remember the basic laws and mechanisms of magnetochemistry and recognize different magnetic materials

CO4: Remember the structure and functioning of natural bio-inorganic molecules as well as appraise the role of synthetic coordination compounds in therapy

Unit 1 -Quantum theory and Atomic Structure

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Quantum theory and Atomic Structure]

Postulates of quantum mechanics, setting up of different observables, commutation relations, step-up and step-down operators. Simple harmonic oscillator. Angular momentum of inner quantum number j. Approximation methods: Variation method and application to Hatom. Perturbation theory (first order and non-degenerate), application to the Heliumatom.

Unit 2- Symmetry and Group Theory

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Symmetry and Group Theory]

Representation of groups –some properties of matrices & vectors, representation of groups, the Great orthogonality theorem and its consequences, character table, wave functions as basis for irreducible representations, direct product, identifying non- zero matrix elements.

Unit 3- Magnetochemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Magneto chemistry]

Magnetic susceptibility and basic derivation of diamagnetic susceptibility, pascal constant and its utility, Curie law and Curie-Weiss law, antiferromagnetism and ferromagnetism. Types of ant ferromagnetism, antiferromagnetic exchange pathway: Direct–metal-metal interaction and Indirect-atom exchange i.e. super exchange mechanism.

Unit 4- Bio-inorganic Chemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Bio-inorganic Chemistry]

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

Metalloporphyrins (enzymes) definition, hemoglobin and myoglobin, cytochrome, vitamin B_{12} (cyanocobalamin), zinc metallo enzymes, nitrogen fixation, essential and trace elements in biological system, biochemistry of non metals K, Na pump (action of bath ions), toxic metals and their toxicity. Co-ordination compounds in medicine

Chelation therapy, gold compounds and rheumatoid arthritis, anticancer drugs –platinum complexes, gold complexes, metallocenesetc, antimicrobial agents, metal complexes as radio diagnostic agents, magnetic resonance imaging.

- (4) Elements of Magnetochemistry, Dutta and Syamal, 1993
- (5) Bioinorganic Chemistry, I. Bertini, H. B. Gray and S. J. Lippard

Other Reference Books: PCH 1801: Inorganic Chemistry (Theory)

(1) Quantum Chemistry, Ira N. Levine, Prentice Hall

(2) Elementary Quantum Chemistry by D. L. Pilar, McGraw Hill Book Co, New York (1968)

(1968)

- (3) Quantum Mechanics in Chemistry, M. W. Hanna The Benjamin Pub.
- (4) Molecular Quantum Mechanics, Third Edition, P. W. Atkins and R.S. Friedman
- (5) Group theory and symmetry in chemistry, L. H. Hall (McGraw Hill)
- (6) Group theory in Chemistry V. Ramkrishnan & M. S. Gopinadhan Vishal Pub.1996.
- (7) Inorganic Chemistry, Alan G. Sharpe Third Edition,
- (8) Theoretical Inorganic Chemistry, M. C. Day, J. Shellin
- (9) Hermann Dugas, Bioorganic Chemistry, A Chemical Approach to Enzyme Action, Springer International Edition
- (10) Inorganic Chemistry, K. F. Purcell and J. C. Kotz.
- (11) Principles of Bioinorganic Chemistry, S. J. Lippard and J. M. Bers
- (12) Bioinorganic Chemistry, I. Bertini, H. B. Gray, S. J. Lippard and J. S. Valentine, University Science Books
- (13) Introduction to Magnetochemistry, Alan Earnshaw, 1968

Semester: 1 Course Name: Organic Chemistry (Theory) No. of Credits: 04

Course Code: PCH-1852 Learning 60 Hours Hours:

Course Outcomes:

CO1: Apply the knowledge of basic organic reaction mechanisms to infer various aspects of elimination reaction, nucleophilic reactions and molecular rearrangements

CO2: Remember the generation and reactivity of reactive intermediates like carbocations, carbanions etc

CO3: apply the theories of aromaticity to examine molecules and predict their aromatic and antiaromatic character

CO4: employ the fundamentals of stereochemistry to predict the configuration of complex chiral molecules and their roles in enantioselective synthesis

Unit-1

(15L)[14Marks]

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Elimination Reaction and Nucleophilic Substitution Reaction]

(A) Elimination Reaction

The E1, E2 and E1CB reaction mechanism. reactivity-effects of substrate structures, attacking base, leaving group and medium. Regiochemistry of E1 and E2 elimination reactions. Stereochemistry of E2 eliminations in cycloalkane and related systems. Mechanism and orientation in Pyrolytic eliminations in (1) Acyclic systems (ii) Alicyclic systems (iii) Cope eliminations. Thermal decomposition without rearrangement. - The chugaev reaction.

(B) Nucleophilic Substitution Reaction

Mixed S_N^{1} , S_N^{2} and SET mechanism. Nucleophilic substitution at (i) Allylic carbon (Allylic rearrangements) (ii) An Aliphatic trigonal carbon (the tetrahedral mechanism) and at (iii) A Vinyl carbon. Participation of Neighboring groups in Nucleophilic substitution by (a)

Carboxylate anion (b) Halogen atoms (c) Hydroxyl groups (d) Acetoxyl group (e) Phenyl group (f) RS group (g) Participation by π -bond.

Unit-2 Molecular rearrangements

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Molecular rearrangements]

Introduction: Definition and classification.

(I) Rearrangements Induced by Cationic or Electron Deficient Sites

Molecular rearrangements involving electron deficient carbon:

- (i) Wagner- Meerwein
- (ii) Pinacol- Pinacolone rearrangement

Department of Chemistry

M.Sc. Analytical Chemistry

(iii) Tiffeneau-Demjanov Rearrangement
Rearrangements to Electron Deficient Heteroatoms
Electron deficient Nitrogen:

(i) Lossen rearrangement
(ii) Curtius rearrangement
(iii) Schmidt rearrangement

Electron deficient Oxygen:

(i) Baeyer-Villager Rearrangement

(II) Rearrangements Induced by Bases or Electron Rich Sites

- (i) The Favorskii Rearrangement
- (ii) Wittig and Stevens Rearrangement
- (iii) Benzylic acid rearrangement
- (iv) The Sommelet-Hauser rearrangement

Unit – 3

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to reactive intermediates and aromaticity]

(A) Reactive intermediates

Carbocations (classical and non classical), Carbanion, Carbines, Free radicals and Nitrenes: their stability, structure, generation and fate.

(B) Aromaticity

Aromaticity, aromatic character, Frost circle diagram for cyclobutadiene, benzene and others. Resonance and chemical stabilization-aromatic character based on NMR criteria, Huckels molecular orbital (HMO) method, MO of simple organic systems such as ethene, allyl and butadiene. Aromaticity in benzenoid and non-benzenoid compounds and charged rings, annulenes, fulvenes, azulenes, antiaromaticity and homoaromaticity.

Unit –4 Stereo Chemistry

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Stereo Chemistry]

Planar and helical Chirality: Configurational nomenclature: Planar chiral ANSA compounds and transcyclooctene. Helical chiral compounds. Enantioselective Synthesis – Epoxidation of allyl alcohols (Sharplessepoxidation), Enantioselectivity through Hydroboration-Oxidation, Enantioselectivity through use of Phase transfer catalysts, Reduction of ketones with chiral hydride donors. Asymmetric resolution: Dynamic resolution, Dynamic kinetic resolution and Dynamic Thermodynamic resolution.

Reference Books: PCH 1802: Organic Chemistry: (Theory)

Core Reference Books

- Advanced Organic Chemistry, Reactions Mechanisms and Structure, J. March, 6thEdition, John Wiley.
- (2) Advanced Organic Chemistry Part A: Structure and Mechanism and Part B:Reaction and synthesis ,Francis A. Carey, Richard J. Sundberg, 5th Edition, Springer .
- (3) Advanced Organic Chemistry Part B: Structure and Mechanism and Part B:Reaction and synthesis ,Francis A. Carey, Richard J. Sundberg, 5th Edition, Springer
- (4) Stereo Chemistry, P.S. Kalsi , New Age Publications.
- (5) Organic Reaction mechanism, Third edition, V. K. Ahluwalia, RakeshkumarParashar, Narosa Publishing house New Delhi.

IV. Other Reference Books: PCH 1802: Organic Chemistry:(Theory)

Department of Chemistry

M.Sc. Analytical Chemistry

- (1) Carbenes, nitrenes and arynes, T.L. Gilchrist and C.W. Rees.
- (2) Guidebook to Mechanism in Organic Chemistry by Peter Sykes, 6th Edition, Prentice Hall
- (3) Organic Chemistry, Jonathan Clayden, Nick Geeves, Stuart Warren, 1st Edition, Oxford University Press.
- (4) Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, 3rd Edition, Blackie Academic and Professional.
- (5) Reagents in Organic Synthesis- Fieser and Fieser, John Wiley.
- (6) Stereochemistry of Organic Compounds, Ernest L. Eliel, Samuel H. Wilen, Wiley-Blackwell.
- (7) Organic Chemistry, T.W. Graham Solomons and Graig B. Frymes, John Wiley and Sons.
- (8) Dynamic Stereochemistry of Chiral Compounds: Principles and Applications, Christian Wolf, RSC publishing.
- (9) Organic Chemistry Vol 1-2 I.L.Finar 5th edition, ELBS.

Semester: 1 Course Name: Physical Chemistry (Theory) No. of Credits: 04

Course Code:PCH-1853Learning Hours:60 Hours

Course Outcomes:

CO1: Employ the fundamentals of thermodynamics to examine the third law as well as interpret the changes from ideal to real states for solutions and gases

CO2: use the principles of chemical kinetics to derive the rate equations for complex and fast reactions as well as remember the experimental techniques used to study the kinetics of these reactions

CO3: employ the fundamentals of solid-state chemistry to examine the bonding in solids and interpret phenomenon such as diffusion and electrical conduction and super conduction in solids

CO4: Use the BET adsorption isotherms to calculate surface area, surface tension etc; to understand heat of adsorption and ways of determining it and using this to understand more about micelles

Unit -1 Chemical thermodynamics

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Chemical thermodynamics]

Experimental verification of third law of thermodynamics, entropy correction for real gases, partial molar quantities and their determination, Gibbs-Duhem equation, chemical potential, chemical potential of idea gases and solutions, Raoult's law, real solutions, free energy and solutions, activity and activity coefficients, fugacity of gases and liquids and methods of its determination. Non equilibrium thermodynamics-basic concepts.

Unit -2 Chemical Kinetics

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Chemical Kinetics]

Unimolecular reactions, chain reactions and branched chain reactions, explosion limits, chain reaction between hydrogen and bromine, theory of absolute reaction rates, Kinetics of fast reaction and some experimental techniques for studying fast reactions like NMR, Mass Spectoscopy, Gas chromatography, Flow method and Flash photolysis method.

Unit -3 Solid state chemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Solid state chemistry]

Bondingin solids and electronic structure in solids, bond theory-metals, semiconductors and insulators, defects in crystals, calculation of schottly and Frenkel defects using statistical method, non-stoichiometry –FeO (wustite), solid electrolytes, diffusion in solids- Fick's laws, mechanism of diffusion, electrical conductivity in solids, super conductivity, perovskites.

Unit -4 Surface chemistry

Department of Chemistry

M.Sc. Analytical Chemistry

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

Page: 9 / 48

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Surface chemistry]

Physical and chemical adsorption, BET equation, heat of adsorptionand its measurement by Calorimetric and Clausius Clapeyron equation methods, determination of surface area of adsorbents by BET method, surface tension and adsorption from solutions, Gibb's adsorption equation, micellisation and critical micellar concentration (cmc).

Core Reference books:

- (1) Advanced physical chemistry by Gurdeep Raj 35th revised edition, Goel publishing house.
- (2) Thermodynamics for chemists by S.Glasstone, Read Books, 2007.
- (3) Solid state chemistry ,An introduction : 4th edition CRC press by Smart and Moore

IVReference books: PCH 1803: Physical Chemistry (Theory)

- (1) Physical chemistry by W.J.Moore, 5^{th} edition, orient longman private ltd.
- (2) Textbook of physical chemistry by S. Glasstone, D. Van Nostrand company, inc., 1946.
- (3) Textbook of physical chemistry by <u>Peter AtkinsJulio de and Paula</u>, 9th edition, oxford press.
- (4) Advanced physical chemistry by J.N.Gurtu, A.Gurtu, 11th edition, Pragati prakashan.
- (5) Physical chemistry by S. Castellan, 3rd edition, Pearson Custom Publishing.
- (6) Thermodynamics of non equilibrium processes- Karapitianeh
- (7) Chemical Kinetics by Laidler, 3rd edition, Pearson Education India
- (8) Chemical Kinetics Frost and Pearson
- (9) Principles of the Solid State by H.V.Keer, 2nd edition ,New Age Internation (P) Ltd.
- (10) Introduction to Solids by L.Azaroff, 1st edition, McGraw Hill Education India Pvt Ltd.
- (11) Physical Chemistry of Surfaces by A.W.Adamson,6th edition, Wiley-Interscience.
- (12) Surface chemistry Osipov
- (13) Solid State Chemistry and its Applications by Anthony R West, 2nd edition 2014, Wiley.

(14) Chemical Thermodynamics: Classical, Statistical and Irreversible by S Chand, 2nd edition. Rajaram & Kuriakose,

Semester: 1 **Course Name: Analytical Chemistry (Theory)** No. of Credits: 04

PCH-1854 Course Code: Learning Hours: 60 Hours

Course Outcomes:

CO1: identify the sampling technique and calibration method for a given sample/glassware etc. and to learn about validation of analytical methods using different statistical parameters

CO2: Identify, recognize and remember the fundamentals of UV-Vis spectrophotometry and apply them effectively for structural and quantitative analysis of molecules and complexes

CO3: Remember the principle of thermal analysis and recognize the different techniques/instrumentation like DSC, DTA etc for industrial applications

Unit -1Analytical objectives, sampling and calibration methods (15L)[14 Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Analytical objectives, sampling and calibration methods]

Scope of analytical science and its literature, sampling and sample preparation, general steps in chemical analysis, calibration and classification of glassware, validation of analytical methods, finding the best straight line-least square regression , correlation coefficient, calibration curves, standard addition technique internal standard method. Numericals based on chemical concentrations.

Unit-2 Fundamentals of spectrophotometry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Fundamentals of spectrophotometry]

Properties of light, absorption of light, interaction of light with matter and origin of spectra, spectrophotometer-instrumentation of single and double beam, Beers Law-its use, limitation and numericals, photometric accuracy.

Unit-3 Applications of spectrophotometry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Applications of spectrophotometry]

Analysis of mixture, measurement of equilibrium constant, Scatchard Plot, Stoichiometry determination-method of continuous variation-Jobbs Plot, Photometric titrations.

Unit-4 Thermal methods of analysis

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Thermal methods of analysis]

Principle, instrumentation and applications of Thermo Gravimetric Analysis (TGA), Differential thermal analysis (DTA) and Differential Scanning Calorimetry (DSC).

(15L)[14 Marks]

(15L)[14 Marks]

(15L)[14 Marks]

Reference books: PCH1804: Analytical Chemistry (Theory)

Core Reference books:

.

- (1) Principles of Instrumental Analysis, by Douglas A. Skoog, 3rd Edition, Holt- Saunders International Edition.
- (2) Quantitative Chemical Analysis, by Daniel C. Harris, 5th Edition, W.H. Freeman and Company, New York.
- (3) Fundamentals of Analytical Chemistry by Crouch, West and Skoog,9th edition, Brooks/Cole (2013)

Other Reference books: PCH1804: Analytical Chemistry (Theory)

- (1) Analytical Chemistry, by Gary D. Christian, 6th Edition, John Wiley and Sons Inc. New Jersey.
- (2) Instrumental Methods of Chemical Analysis, by Galen W. Ewing, 4thEdition, International Student Edition.

Semester: 1 Course Name: Inorganic Chemistry and Organic Chemistry (Practicals) No. of Credits: 04 Course Code: PCH-1855L Learning Hours: 2X3 Hours

Course Outcomes:

CO1: Use the fundamentals of semi-micro qualitative analysis to determine six radicals in an unknown mixture

CO2: Perform green preparation of complexes

CO3: Use the fundamentals of organic synthesis to prepare a variety of organic molecules

CO4: Perform organic estimation of some functional groups

(A) Advanced Inorganic Chemistry (Practicals)

Course Content

- (1) Solid phase synthesis of trans-bis glycinato copper (II)
- (2) Non-metal complex: Synthesis and characterization of bispyridine iodide nitrate.
- (3) Nano-chemistry: Preparation of manganese dioxide nanoparticles.
- (4) Synthesis of hexaammine cobalt (III) chloride.
- (5) Determine the presence of F, As, Zn, Cd, Pb, Cu in drinking water and heavy metal in food samples.
- (6) Determination of the half wave-potential for Cd (II) or Cu (II) or Zn (II) ion in 0.1 M KCl solution.
- (7) Study the kinetics of dissociation of tris-O-phenanthroline Fe (II), Ni (II) complex by spectrophotometric method.
- (8) Catalytic reduction activity of silver nano particle for p-nitrophenol and other derivatives.

Projects:

- (1) Just like heavy metal detection in waste water, in chocolate and toys with the help of nano-particles.
- (2) Bio chemical sensing with nano-particles.

References books: PCH1805L (A): Advanced Inorganic Chemistry (Practicals)

- (1) Vogel's Qualitative Inorganic Analysis, Revised by G Svehla, Sixth Edition, Longman, 1987.
- (2) Monograph on Green Chemistry Laboratory Experiments, Green Chemistry Task Force Committee, DST.

(B) Organic Chemistry (Practicals)

II. Course Content

Department of Chemistry

(a)Preparation of organic compounds: Single Stage Preparations:

- (1) Preparation of 1-Phenyl-3-methyl-5 pyrazolone from acetoacetic ester.
- (2) Preparation of Dibenzylidene acetone from Benzaldehyde.
- (3) Preparation of o-Chlorobenzoic acid from o-amino benzoic acid.
- (4) Preparation of 2,4-Dinitroanisole from Anisole
- (5) Preparation of Phthalimide from phthalic acid.
- (6) Preparation of Para Red
- (7) Preparation of methyl Orange.
- (8) Preparation of Benzo triazole from o-Phenylene diamine
- (9) Preparation of 1,2,3,4 tetrahydrocarbazole from phenyl hydrazine. (Fisher Indole synthesis)
- (10) Preparation of p-Bromo acetanilide from acetanilide (Green route)

(b) Quantitative Estimations:

- (1) Estimation of ester + acid
- (2) Estimation of Formaldehyde
- (3) Estimation of glycine
- (4) Estimation of amide + acid

References books: PCH1805L (B): Organic Chemistry (Practicals)

- (1) A text book of practical organic chemistry A. I. Vogel
- (2) Practical organic Chemistry Mann and Saunders
- (3) A handbook of quantitative and qualitative analysis H. T. Clarke
- (4) Comprehensive Practical Organic Chemistry : Qualitative Analysis V K Ahluwalia& S. Dhingra.
- Comprehensive Practical Organic Chemistry : Preparations and Quantitative Analysis V K Ahluwalia& R. Aggarwal Universities Press.
- (6) An Advance Course in practical Chemistry, A K. Nad, B. Mahapatra and A. Ghoshal.

Semester: 2Course Name: Physical Chemistry and Analytical ChemistryCourse Code:PCH-1856L(Practicals)Learning Hours:2X3 Hours

Course Outcomes:

CO1: Use the conductometer to do acid-base titrations involving mixtures

CO2: Use the potentiometer to determine solubility product and oxidation potentials

CO3: Use the pH meter to do acid-base titrations to determine the assay of a drug and concentration in mixtures

CO4: Perform experiments based on adsorption and kinetics

CO5: Perform experiments based on distribution coefficient

CO6: Calibrate glass wares used in an analytical laboratory

CO7: Perform titrations to determine the assay of drugs and other commercial preparations

CO8: Perform water analysis

(A) Physical Chemistry (Practicals)

II. Course Content

(1). Conductometry

- (a) To determine on centration of HCl and NH₄Cl in a given solution conductometrically (requirements: 0.05N HCl, 0.5 N NH₄Cl, 0.5 N NaOH)
- (b) Estimate the concentration of H_2SO_4 , CH_3COOH and $C_USO_4 5 H_2O$ in a given solution conductometrically. (0.005M all against 0.05N NaOH)

(2) Potentiometry

- (a) To construct the calibration curve for quinhydrone electrode and hence the standard oxidation potential of quinhydrone electrode. (0.2N CH₃COONa, 0.2NCH₃COOH)
- (b) Solubility product of silver halides.

(3) pH metry

- (a) To determine the amount of Aspirin in a given solution.(aspirin,0.1N alcoholic KOH, glass and calomel electrodes)
- (b) Titration of mixture of bases (Na₂CO₃& NaHCO₃) with standard HCl and find the concentration of bases.

(4) Adsorption and kinetics

- (a) To study the rate of acid catalysed ionization of acetone in presence of excess acid and acetone at room temp. (requirement: acetone, iodine, sulfuric acid sodium acetate, 0.01sodium thiosulphate, starch)
- (b) To determine the autocatalytic reaction between $KMnO_4$ and oxalic acid.

Department of Chemistry

(Requirements:0.1M H₂C₂O₄, 10%KI, 0.01M Na₂S₂O₃, 0.02M KMnO₄, 0.2M MnSO₄,

1% starch, 1.0 M H₂SO₄)

(5)Distribution method

- (a) Distribution of HAC between H2O and CHCl₃/ CCl₄.
- (b) Distribution of I₂ between H₂O and CCl₄.

References books:PCH1806L (A): Physical Chemistry (Practicals)

- (1) Advanced Practical Physical ChemistyBy J.B.Yadav, 32nd editon Krishna publication.
- (2) Practicals in physical chemistry by P.S.Sindhu, Macmillan 2005.
- (3) Experimental physical chemistry by R.C.Das, B.BeheraTata McGraw-Hill, 1983.
- (4) Experimental Physical Chemistry by Athwale , Mathur and Parul, 1st edition reprint 2011,New Age International (P) Ltd.

(B)Analytical Chemistry (Practicals)

II. Course Content

- (1) Calibration of glass wares and balance.
- (2) Determination of % age purity of given sample of Isoniacid.
- (3) Determination of % age of Asprin in the given tablet.
- (4) Determination of available chlorine in bleaching powder.
- (5) Determination of vitamin C in orange juice/amla.
- (6) Determination of acetic acid in vinegar.
- (7) Determination of sodium carbonate and sodium bicarbonate in washing soda.
- (8) Determination of ascorbic acid in vitamin C tablets.
- (9) Determination of % age purity of given sample of Analgin tablet.
- (10) Determination of calcium and magnesium in water sample.
- (11) Determination of sulphate in water sample.
- (12) Determination of chloride in water sample.

References books:PCH1806L (B):Analytical Chemistry (Practicals)

- (1) Analytical Chemistry Practice, John H. Kennedy, Saunders College Publishing, Second Edition 1990.
- (2) Vogels Textbook of Quantitative Chemical Analysis, 6th Edition, 2002.

Semester: 2 **Course Name: Inorganic Chemistry (Theory)** No. of Credits: 04

Course Code: PCH-2851 Learning Hours: 60 Hours

Course Outcomes:

CO1: Apply the principles of VSEPR and molecular orbital theory to deduce the properties of conjugated systems, conductors, semi-conductors and insulators

CO2: Use the basics of molecular symmetry and spectroscopy to predict the IR and Raman spectra of molecules

CO3: To recognize the bonding modes in organometallic compounds with various organic ligands

CO4: To remember the reaction mechanisms in coordination compounds

Unit 1- Chemical Bonding

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to VSEPR theory and Chemical Bonding

VSEPR, Walsh diagrams(tri atomic molecules), Bent rule and Simple Huckel theory of linear conjugated systems, simple Huckel theory of the cyclic conjugated system and aromaticity, selfconsistent filed method, valence state ionization potentials,

Band theory of solids, Fermi level, electrical properties, insulators, semiconductors and superconductors (properties).

Unit 2- Application of symmetry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to symmetry and *IR and Raman spectra*]

Application of symmetry to hybrid orbital, molecular orbitals, hybridization schemes for σ orbitals, π bonding and molecular orbital for ABn type of molecules.

Application of symmetry to molecular vibrations, interpretation of IR and Raman spectral data.

Unit 3-Organometallic Compounds

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Organometallic *Compounds*]

Organometallic compounds of transition elements, stability of metal carbon bond in complexes. Synthesis, uses and structure of organometallic compounds of π bonding organic ligands, 2electron ligands, olifinic and acetylinic complexes, compound with 3 electron ligand - allylic complexes, compounds. With 4- electron ligands butadiene complexes, n4 complexes of cyclopentadiene, compounds with 5 electron ligands – cyclopantadionyl, compounds with 6 electron ligands, n6 complexes of benzene and its derivatives. Role of organometallic compounds in catalytic reaction.

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

Unit 4 – Reaction Mechanism

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Inorganic Reaction Mechanism]

Mechanism of substitution reaction in square planar complexes. Kinetics of substitution reaction of platinum (II) complexes.

Effect of leaving group, effect of charge, steric effect, solvent effect, effect of nucleophile, effect of temperature and other effects.

Oxidation-Reduction reaction, electron transfer, tunnelling effect, Marcus –Hush theory, one and two electron transfer inner sphere and outer sphere, effect of ions on rate, electron transfer through extended bridges, unstable oxidation states, hydrated electron.

- (15) Coates G. E. Green MIH Wade, K and Aylett B. J. Organo Metallic Comounds Chapman and Hall, London

Semester: 2 Course Name: Organic Chemistry (Theory) No. of Credits: 04

Course Code:PCH-2852Learning Hours:60 Hours

Course Outcomes:

CO1: To recognize the selectivity and utility of a variety of reagents in organic reactions

CO2: To remember the mechanism and synthetic applications of name reactions

CO3: To apply the fundamental knowledge of heterocycles to elucidate the synthesis, structure and application of polyheteroatomic and benzofused heterocycles

Unit - 1: Application Redox and reagents in organic synthesis. (15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Oxidation and reduction]

(A) Oxidizing agents, Reducing agents and Mechanistic explanation of oxidation and reduction with example.

Oxidation with Manganese, KMnO₄ ,Chromium, Peracid, Peroxide, Dimethyl dioxarane SeO₂,NBS,DDQ,Chloranil and Oppenauer oxidation.

- (B) Reduction:
 - (i) Reduction with Hydride transfer reagents like LiAlH₄,NaBH₄,Diborane.
 - (ii) Reduction by Dissolving metals Zn, Li, Na.
 - (iii) Birch reduction and catalytic reduction.

Unit – 2

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Photochemistry and Heterocyclic compounds]

(A) **Photochemistry:**

(1) Photochemical reactions: Principles of energy transfer, electronic excitation and molecular orbital view of excitation, excited states and excitation and molecular orbital view of excitation, excited states and fate of excited molecules (modified Jablonski diagram), Photosensitization.

(2) Photochemistry of carbonyl compounds: Representation of excited states of ketones, photo reduction Norrish type I & Π reactions, Reactions of cyclic Ketone, oxetane formation (Paterno-Buchi reaction)

(3) Di- π methane rearrangement, Dienone photochemistry, cis-trans isomerisation and photochemistry of conjugated olefins.

(B) Chemistry of Heterocycles

Department of Chemistry

(1) Nomenclature of heterocycles: Few examples of systematic nomenclature (Hantzsch-Widman system) for monocyclic, fused and bridged heterocycles.

General chemical behavior of following aromatic heterocycles: their synthesis and important applications. (Three examples each)

(2) Five-membered and benzo fused five member heterocycles :Oxazole, Isoxazole, Thiazole, Pyrazole, Imidazole, Benzothiazole and Benzimidazole.

(3) Six membered and benzofused six membered heterocycles :Pyrazine, Pyridazine, Pyrimidine, Cinnoline, Quinazoline, Quinoxaline, Phenoxaline.

Unit – 3Name reactions:

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Name reactions]

General nature, method, mechanism and synthetic applications of the following named organic reactions:

(i)	Suzuki reaction	(ii)	Buchwald Hartwing reaction (cross coupling)
(iii)	Sonogarshira coupling	(iv)	Vilsmeier-Haack reaction
(iv)	Mitsunobu reaction	(vi)	Stobbe condensation
(vii)	Jones oxidation	(viii)	Swern oxidation reaction
(ix)	Michael addition	(x)	Dickmann reaction
(xi)	Knoevanagel reaction	(xii)	Darzen'sglycidic ester synthesis
(xi)	Mannich reaction	(xiv)	Witting reaction

Unit-4 Reagents in organic synthesis:

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Reagents in organic synthesis]

Mechanism selectivity and utility of following reagents:

- (i) Gilman's reagent-Lithium dimethylcuprate (ii) Lithium diisopropylamide (LDA)
- (iii) Dicyclohexylcarbodiimide (DCC) (iv) 1,3 Dithiane (Umpolung reagent)
- (v) Dess- Martin periodinane (vi) Bakers yeast
- (vii) Diisobutylauminiumhydride (DIBAL –H)
- (viii) Sodium cyanoborohydride (NaBH₃(CN)) (ix) Grignard reagents
- (x) Sodium borohydride (xi) DDQ (xii) n-Butyl lithium
- (xiii) Phase transfer catalysis : Quaternary ammonium and phosphonium salts, crown ethers.

Semester: 2 Course Name: Physical Chemistry (Theory) No. of Credits: 04

Course Code:PCH-2853Learning Hours:60 Hours

Course Outcomes:

CO1:To identify the principles of statistical thermodynamics and hence apply statistical mechanics to molecular problems of chemical thermodynamics

CO2: To identify the various aspects of nuclear chemistry to define its application in energy generation and therapeutics

CO3: use the basic principles of physical chemistry to determine the kinetics, thermodynamics and molecular mass of polymers

CO4: Apply the fundamentals of overvoltage, decomposition potentials and electrochemical polarization to explain the theory and working of polarography

Unit-1 Statistical thermodynamics

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Statistical thermodynamics]

Concepts of distribution of molecules, microstate and macro state. Ensemble averaging, Canonical, grand canonical and microcanonical ensembles, Maxwell-Boltzman distribution laws (using Lagrange's method of undetermined multipliers). Fermi-Dirac statistics – distribution law and Bose-Einstein statistics – distribution law.

Partition functions – translational, rotational, vibrational and electronic partition

Unit-2 Nuclear chemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Nuclear chemistry]

Nuclear properties-nuclear radius, coulombic and nuclear potential radius, nuclear spin and angular momentum, magnetic moment, nuclear binding energy, nuclear models-shell model, liquid drop model, Fermi gas model, collective model, radioactive decay, nuclear reactions, evaporation, spallation, fragmentation, fission and fusion reactions, accelerators, reaction cross section, use of radioisotopes as tracers.

Unit-3 Polymer chemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Polymer chemistry]

Kinetics and mechanism of polymer processes, criteria of polymer solubility, thermodynamics of polymer solutions, polymer characterization, molecular weight of polymer (number average and weight average), methods of molecular weight determination, properties of polymers and applications.

Department of Chemistry

M.Sc. Analytical Chemistry

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

Unit-4 Electrochemistry

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Electrochemistry]

Sign convention-American, European and IUPAC; Polarization ,demonstration of polarization, elimination of polarization ,Decomposition Potential-Factors ,applications and measurement of Decomposition potential and Overvoltage and factors affecting overvoltage, basic principle of polarography, origin of different types of current; Ilkovic equation. polarographic wave equation, Importance of E1/2 in polarography ,Dependence of E1/2 on pH and complexing agents(derivation),Pilot ion method and standard addition method to determine concentration.

- (13) Nuclear and radio chemistry by J.W. Kannedy, G.Friedlander, 3rd edition, Wiley.
- (14) Modern Electrochemistry by Bockris and Reddy Fred W. Billmeyer Jr.,

Semester: 2 Course Name: Analytical Chemistry (Theory) No. of Credits: 04

Course Code:PCH-2854Learning Hours:60 Hours

Course Outcomes:

CO1: To use different techniques like liquid-liquid extraction, counter current extraction, digestion and solid phase extraction for sample preparation

CO2: To identify as well as remember the principles and theory of chromatography and to apply them to interpret and use data generated by specialized chromatographic techniques such as GC, HPLC, HPTLC and IEC

CO3: To apply the principles of electrochemistry in the quantitative analysis of various ionic solutions using different types of ion selective electrodes

Unit-1 Sample Preparation Techniques

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Sample Preparation Techniques]

Liquid-liquid extraction/solvent extraction-partition coefficient, distribution ratio and percent extraction.Solvent extraction of metal ions-ion association complexes and metal chelates, multiple batch extraction, Craig's counter-current distribution. Accelerated and Microwave assisted extraction, protein precipitation and solid phase extraction (SPE).

Unit -2 Basic Principles of chromatography

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Basic Principles of chromatography]

Chromatographic Methods Principles of chromatography, classification of chromatographic techniques based on mechanism of retention, configuration, mobile and stationary phase. Importance and meaning of terms –Partition Ratio, Retention Time and Dead Time, Capacity Factor and Selectivity Factor, Efficiency of separation- plate theory (theoretical plate concept) and rate theory (Van Deemter equation).

Unit -3 Specialized chromatographic techniques

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Basic Principles of chromatography and Specialized chromatographic]

Principles, instrumentation and applications of Gas Chromatography, HPLC, HPTLC and Ion exchange chromatography.

Unit -4 Electro-Analytical Chemistry

(15L)[14Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Electro-Analytical Chemistry]

Department of Chemistry

M.Sc. Analytical Chemistry

(15L)[14Marks]

(15L)[14Marks]

(15L)[14Marks]

pH measurement with glass electrode, working of glass electrode, mechanism of pH measurement, calibration of glass electrode, errors in pH measurement. Classification, principle, properties and design of ion selective membrane electrodes- Glass electrodes for ions other than H^+ , Solid precipitate electrode and single crystal electrode, Liquid ion exchange electrode, ion molecular sieve electrodes. Ion, Gas-sensing probes and enzyme substrate electrodes.

Semester: 2 Course Name: Inorganic Chemistry and Organic Chemistry Course Code: PCH-2855L (Practicals) No. of Credits: 04 Learning Hours: 2X3 Hours

Course Outcomes:

CO1: To prepare and determine the purity of double and complex salts

CO2: To perform the colorimetric estimation of some transition metals using complexation

CO3: To apply the principles of organic spotting to analyse ternary organic mixtures

(A) Inorganic Chemistry (practicals)

II. Course Content

- (1) Preparation and determination of purity of double and complex salts. At least seven preparations should be done.
- (2) Colourimetric estimation of any four out of Cu, Mn, NO₂, Ni, P, Fe, V, Ti, Cr, Co.

References books: PCH2805L (A) : Inorganic Chemistry(Practicals)

- (1) Vogel's Textbook of Quantitative Chemical Analysis, 6th Edition, 2002.
- (2) Advanced Practical Inorganic Chemistry, Gurdeepraj, Goel Publishing House, 2001.
- (3) An Advanced Course in Practical Chemistry, A.K. Nad, B. Mahapatra, A. Ghosal, New

Central Book Agency, 2004

(B) Organic Chemistry (practicals)

II. Course Content

Mixture analysis: ternary mixture to be given. (S+S+S) or (L+L+L). Type determination. Separation by physical and chemical methods. (both permitted in case of liquids).

References books: PCH2805L(B): Organic Chemistry (Practicals)

- (1) A text book of practical organic chemistry A. I. Vogel
- (2) Practical organic Chemistry Mann and Saunders
- (3) A handbook of quantitative and qualitative analysis H. T. Clarke
- (4) Comprehensive Practical Organic Chemistry : Qualitative Analysis V K Ahluwalia& S. Dhingra.
- (5) Comprehensive Practical Organic Chemistry : Preparations and Quantitative Analysis, V KAhluwalia& R. Aggarwal Universities Press.
- (6) An Advance Course in practical Chemistry, A K. Nad, B. Mahapatra and A. Ghoshal.

Semester: 2 Course Name: Physical Chemistry and Analytical Chemistry Course Code: PCH-2856L (Practicals) No. of Credits: 04 Learning Hours: 2X3 Hours

Course Outcomes:

CO1: Use the conductometer to verify Ostwald's dilution law and Debye-Huckel-Onsager's equation

CO2: Use the potentiometer to perform acid-base titrations, precipitation titration and redox titrations

CO3: Use the pH meter to do determine the dissociation constant of a weak acid and the ionization constant of a tribasic acid

CO4: Perform experiments based on kinetics

CO5: Perform experiments based on distribution coefficient

CO6: Perform environmental analysis like determination of DO, COD

CO7: Perform titrations to determine the assay of drugs and other commercial preparations

CO8: Perform water and oil analysis

(A) Physical Chemistry (practicals)

II. Course Content

(1) **Conductometry**

- (a) Test of validity of Ostwald's dilution law and determination of dissociation constant of weakelectrolyte like CH₃COOH & ClCH₂COOH
- (b) Verification of Debye-Huckel-Onsager's equation in case of strong electrolytes like HCl, KCl, NaCl.

(2) **Potentiometry**

- (a) Titration of dibasic acid like malonic, oxalic, succinic acid with NaOH and find the dissociation constant of acid.
- (b) Precipitation titration \rightarrow Titration of halids with AgNO₃.
- (c) Redox titration Ferrous ammonium sulfate $-KMnO_4$, $K_2Cr_2O_7$.

(3) pHmetry

- (a) Determination of dissociation constant of weak acid like acetic and monochloroaceticacid
- (b) To titrate phosphoric acid solution against alkali and to calculate the first, second and thirdioniozation constant of it.(0.05M phosphoric acid, 10% neutral CaCl₂, 0.5N NaOH)

(4) Kinetics

(a) Determination of the effect of (a) Change of temperature (b) Change of concentration of reactant and catalyst and (c) Ionic strength of the media on the velocity constant of an acid hydrolysis of an ester.

Department of Chemistry

- (b) Determination of order of reaction between $K_2S_2O_8$ and KI by a fractional change method
- (5) **Distribution method**
- (a) Determination of the formula of the complex formed between cupric ion and ammonia by distribution method.

Referencesbooks: PCH2806L (A): Physical Chemistry (Practicals)

- (1) Practical physical chemistry –J.B.Yadav
- (2) Practicals in physical chemistry P.S.Sindhu
- (3) Experimental physical chemistry R.C.Das, B.Behera
- (4) Experiments in physical chemistry- P.H.Parsania, F. Karia

(B): Analytical Chemistry (practicals)

II. Course Content

- (1) Determination of saponification value of oil.
- (2) Determination of iodine value of oil.
- (3) Determination of iron by chloride extraction by solvent extraction process.
- (4) Determination of dissolved oxygen.
- (5) Determination of chemical oxygen demand.
- (6) Determination of iron in iron tablets.
- (7) Simultaneous estimation of chromium (III) and iron (III) by EDTA titration.
- (8) Simultaneous estimation of calcium (II) and zinc (II) by EDTA titration.
- (9) Simultaneous estimation of lead (II) and magnesium (II) by EDTA titration.
- (10) Separation of aminoacids/ dyes/ drugs by TLC.
- (11) Determination of cation content in hard water by ion exchange chromatography.

References books: PCH2806L (B): Analytical Chemistry (Practicals)

- (1) Analytical Chemistry Practice, John H. Kennedy, Saunders College Publishing, Second Edition 1990.
- (2) Vogel's Textbook of Quantitative Chemical Anal

Semester: 3 Course Name: Analytical Spectroscopy – I (Theory) No. of Credits: 04

Course Code:PCH-3851Learning Hours:60 Hours

Course Outcomes:

CO1: To apply the fundamentals of various types of spectroscopic techniques like IR, Raman, NMR and x-ray and applications of these techniques to interpret data.

CO2: To describe the advancement in spectroscopic methods like FT-IR and Fluorescence and can recognize necessity of these techniques in the field of analytical science.

CO3: To perform quantitative and qualitative measurements of samples by IR.

Unit – I Infrared Spectroscopy

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Infrared Spectroscopy]

Introduction, IR Frequency Range and Spectrum Presentation, Theory of Infrared Absorption, Mechanical Model of Stretching Vibrations, Quantum Treatment of Vibration, Sampling process, Dispersive Spectrometers, Fourier Transform Spectrometers, Hyphenated Method, Analytical Information: Qualitative and Quantitative, Applications.

Unit – 2 Raman Spectroscopy

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Raman Spectroscopy]

Introduction, Dispersive Spectrophotometers: Normal Raman, Fourier Transform Spectrometers: FT – Raman, Resonance Raman spectroscopy, Surface – enhanced Raman Spectroscopy (SERS), Raman Microprobe, Remote Raman Analysis, Raman Depolarization Ratios, Analytical Information: Qualitative and Quantitative, Applications.

Unit – 3 Nuclear Magnetic Resonance Spectroscopy

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Nuclear Magnetic Resonance Spectroscopy]

Introduction, Physical and Chemical Principles, Instrumentation, Quantum description, Energy levels in magnetic field, Classical description, Relaxation process, High resolution, Analytical Information: Qualitative and Quantitative, Applications.

Unit – 4

(15L) [14 Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to X - Ray Diffraction and X - Ray Fluorescence Spectroscopy]

(i) X – Ray Diffraction

Introduction, Single – Crystal Diffraction, Powder Diffraction, Analytical Information: Qualitative and Quantitative, Applications.

(ii)X – Ray Fluorescence Spectroscopy

Introduction, Instrumentation, Analytical Information: Qualitative and Quantitative, Applications

Semester: 3 **Course Name: Electroanalytical Methods (Theory)** No. of Credits: 04

PCH-3852 Course Code: Learning Hours: 60 Hours

Course Outcomes:

CO1: To describe and differentiate various techniques based on electro-analytical principle like Voltammetry, Coulometry and polarography.

CO2: To identify and recognize composition and working of potentiometric, amperometric, conductometric chemical as well as biosensors, and to know applications of field-effect transistors sensors.

UNIT-1 Electroanalytical Measurements

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Electroanalytical *Measurements*]

Voltage and it's measurements, Impedance and it's measurements, Electric double layer, Electrocapillarity, Current, Diffusion transport.

UNIT-2 Voltammetry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Voltammetry] Differential pulse polarography, Square wave polarography, Alternating current polarography, Stripping analysis, Cycling voltametry, Amperometric titration.

UNIT-3 Electrodeposition and Coulometry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Electrodeposition and Coulometry]

Electrolysis, Current-Voltage relation, Coulometric analysis, Electrogravimetric analysis at constant current, constant potential and controlled potential

UNIT-4 Electrochemical Sensors and Biosensors

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Electrochemical sensors and Biosensors]

Potentiometric sensors and biosensors, Amperometric sensors: three generations of Biosensors with their examples, Conductometric sensors and biosensors, Applications of Field-Effect Transistor sensors.

Semester: 3 **Course Name: : Industrial Analytical Chemistry (Theory) Course Code:** No. of Credits: 04 **Learning Hours: 60 Hours**

Course Outcomes

CO1: Remember the principle and process control of automated devices as well as the principles and factors affecting flow injection analysis and to know its applications

CO2: To remember the food regulations and international standards as well as nutritional labeling and

to perform various compositional analysis of foods, characterization of fats and oils as well as adulteration of milk and milk products.

CO3: To perform the instrumental and titrimetric assays for various drugs, Karl-Fischer titration and to

apply it for Moisture/water content determination

CO4:To classify pesticides, fertilizers, soaps and detergents as well as apply the theoretical aspects for

their analysis

UNIT-1 Automation in Measurements

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Automationin *Measurements*]

Principles of automation, automatic and automated devices, Process control: off-line, at-line and online analysis. Continuous and discrete analyzers, feedback mechanism. Flow injection analysis, principles, dispersion coefficient, factors affecting peak height-sample volume, channel length, flow rate and channel geometry. I Applications of FIA, stopped flow measurements and gradient FIA.

UNIT-2 Food Analysis

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Food Analysis] Introduction to food analysis, regulations and international standards related to food analysis, nutritional labeling, Compositional analysis of foods for moisture, proteins, fat, fiber, ash, vitamins and minerals, Characterization of fats and oils: Saponification value, Iodine value, Acid value, Reichert Meissl Value, Polenske Value, Adulteration of fats and oils, Adulteration of milk and milk products.

UNIT-3 Pharmaceutical Analysis

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Pharmaceutical Analysis]

Instrumental and titrimetric assays for anti-diabetic (Zidovudine, Ritonavir), anti-cancer (Paclitraxel, Tamoxifen citrate), anti-tuberculosis (Moxifloxacin hydrochloride, Ciprofloxacin), anti-malarial (Proguanil hydrochloride, Mefloquine hydrochloride), anti-hypertensive (Clonidine, Prazosin) and anti-HIV (Glipizide, Metformin) drugs based on USP/BP/IP. Moisture/water content by Karl-Fischer titration: Principle, types of Karl Fischer titration, preparation and standardization of Karl Fischer reagent.

UNIT-4 Analysis of pesticides, fertilizers, soaps and detergents

Department of Chemistry

M.Sc. Analytical Chemistry

(15L) [14 Marks]

(15L) [14 Marks]

(15L) [14 Marks]

PCH-3853

(15L) [14 Marks]

Page: 33 / 48

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Analysis of pesticides, fertilizers, soaps and detergents,]

Introduction of pesticides and fertilizers, Classification of insecticides, Analysis of organochlorine and organophosphate pesticides by instrumental methods, Types of fertilizers and analysis of different elements like phosphorous sodium, potassium and ammonia, Classification of soaps and detergents, Characterization of soaps and detergents.

Semester: 3 Course Name: Forensic Sciences (Theory) No. of Credits: 04

Course Code:PCH-3854Learning Hours:60 Hours

Course Outcomes

CO1: To recognize the function, composition and examination of blood and can explain different test for its confirmatory analysis from forensic evidences.

CO2: To summarize DNA profiling and fingerprint analysis for forensic analysis based on various biochemical procedures.

CO3: To memorize the concept of toxicology in particular related to poisons, drugs and explosive materials and use various analytical methods for their forensic analysis.

Unit 1 Forensic biology & serology

(15L)[14 Marks]

[Prerequisites or topics for Self-Study: Basic terms and fundamental aspects related to serology]

- (a) Introduction to forensic biology and serology Collection and preservation of biological materials Evidence Collection: Collection of blood samples (liquid blood, wet stains and dry stains); Clean Collection Practices, Packaging of Evidence, Documenting Evidences, Storage of Biological Evidence
- (b) Blood: Function of Blood; Composition of blood; Examination of blood: Physical examination; Presumptive screening test; Tetraethyl Benzidine (TMB) Test; Phenolphthalein Test (Kastle-Meyer Test); Luminol test; Lecomalachite Green test Confirmatory test of blood: Hemochromogen Crystal test(Takayama's test); Haemin Crystal Test(Tichmann's test); Microscopic Method; Spectroscopic Method; Some special test; Detection of species origin of blood; Precipitin Tube Method; Age of blood stain; Detection of blood group; type of bloodstain pattern and application; Factors affecting the detection of blood group from blood stain.

Unit 2 DNA and Finger printing

(15L)[14 Marks]

[Prerequisites or topics for Self-Study: Basic terms and fundamental aspects related to structure and function of DNA and fingerprint analysis]

- (a) Electrophoresis: Introduction, Agarose gel electrophoresis, Double Diffusion Method; Cross electrophoresis, polyacrylamide gel electrophoresis, capillary zone electrophoresis, micellar electrophoresis, capillary electrochromatography and capillary gel electrophoresis.
- (b) DNA Profiling: Introduction, principle, DNA and its polymorphism, DNA typing procedures-RFLP, PCR, MVRPCR, Dot-blot, AMP-FLP, STR, other methods, paternity testing, applications, interpretation and practical use.
- (c) Fingerprint Analysis: Latent fingerprints; optical, physical, physico-chemical & chemical detection methods; fingerprints in blood, fingerprint detection sequences.

Unit 3 Forensic toxicology-I

[Prerequisites or topics for Self-Study: Basic terms and fundamental aspects related to toxicology and explosives]

- (a) Introduction to Toxicology, History of Toxicology, Classification of Toxicology, Concept of Forensic Toxicology and its significance, Development and Advances of Forensic Toxicology; Poisons: Type of poisons, Extraction of poisons; classification of matrices; isolation and clean up procedures using classical and modern techniques
- (b) Explosive and Explosion: Introduction, classification of explosives primary ,secondary or High explosive , detonators pyro technique propellant IEDs and firing mechanism of IEDS; Analysis of explosive: Methods for extraction of explosive from post blast material/ debris, Qualitative analysis of explosives and explosion residue by colour test, TLC/HPTLC and High Performance Liquid Chromatography and FTIR, GC-Mass, LC-Mass. X ray diffraction, equipment used for Detection of explosives and explosive devices.

Unit 4 Forensic toxicology-II

(15L)[14 Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to drugs of abuse and alcohol]

- (a) Drugs: Classification of drugs, isolation, identification and determination of following, Narcoticsheroin and cocaine, Stimulants- caffeine, amphetamines, Depressants- Barbiturates, Benzodiazepines.
- (b) Alcohol in body fluids: Legal background, Sampling and sample preservation, analysis-GC, IR, enzymatic and other methods.

Core Reference Books:

- 1. "Textbook of Forensic medicine and Toxicology: Principle and Practice", by Vij Krishnan, 5th edition, Elsevier, 2014.
- 2. Textbook of Medical Biochemistry, 2nd edition, Wolters Kluwer India Pvt Ltd,2017.
- 3. "Fundamentals of Forensic science", by Houck Max, Siegel Jay, Academic Press, 2015.
- 4. "Textbook of Medicinal Jurisprudence and toxicology", by Modi and Kannan K., Lexis Nexis, 2016.

Reference Books: PCH 3854: Forensic Sciences (Theory)

- 1. "Essential Forensic biology", by Gunn Alan, 2nd edition, wiley, 2009.
- 2. "Basic Analytical Toxicology", by Flanagan R. J., Braithwaite R. A., Brown S. S., WHO, 1995.
- 3. "Forensic Chemistry", by Bell Suzanne, 1st edition, Person Education Ltd, 2005.
- 4. Explosives; by Samuel Delvin, Sarup Book publishers, 2000
- 5. "Textbook of Medical Jurisprudence Forensic Medicine and Toxicology", by Parikh C. K, 6th edition, CBS, 2007.

Semester: 3 Course Name: Analytical Instrumental techniques No. of Credits: 04

Course Code: PCH-3855L Learning Hours: 2X3ours

Course Outcomes

CO1:To perform analysis of cations through flame photometry.

CO2: To apply spectrophotometric techniques for quantative determination of cations and dissociation constants of an indicator

- 1. Spectrophotometric determination of the pK value of an indicator (Methyl red).
- 2. Spectrophotometric determination of the p*K* value of an indicator (Bromothymol blue).
- 3. Simultaneous determination of chromium and manganese by spectrophotometry.
- 4. Spectrophotometric determination of titanium and vanadium in a mixture.
- 5. Determination of sodium from water samples by flame photometry.
- 6. Determination of potassium from water samples by flame photometry.

Semester: 3 Course Name: Industrial applications and titrimetric methods No. of Credits: 04

Course Code: PCH-3856L

Learning Hours: 2X3 Hours

Course Outcomes

CO1: To apply ion-exchange chromatography principle for separation of cations. CO2: To apply kjeldhal's method for determination of total nitrogen.

- 1. Determination of the capacity of an ion exchange resin.
- 2. Separation of Zn^{2+} and Mg^{2+} from a mixture by ion-exchange chromatography.
- 3. Separation of Ni^{2+} and Fe^{3+} from a mixture by ion-exchange chromatography.
- 4. Separation of Co^{2+} and Ni^{2+} from a mixture by ion-exchange chromatography.
- 5. Estimation of ammoniacal nitrogen and total kjeldhal nitrogen by kjeldhal's method.

Demo practical

- 1. Isolation of DNA from blood
- 2. Determination of blood groups
- 3. PCR analysis of DNA
- 4. RAPD analysis of given DNA sample

Semester: 4 Course Name: Analytical spectroscopy – II (Theory) No. of Credits: 04

Course Code:PCH-4851Learning Hours:60 Hours

Course Outcomes:

CO1: To be able to identify, recognize and compare principle, instrumentations and application of Atomic Absorption Spectroscopy (AAS), inductively coupled plasma atomic emission spectroscopy (ICP-AES), Atomic Florescence Spectroscopy (AFS) and implement them effectively for qualitative and quantitative assessment of elements.

CO2: To be able to memorize the theory and principle of mass spectroscopy, various ionization techniques involved and different types of detectors used and to implement the theory to interpret the mass spectra.

Unit -1 Atomic Absorption Spectrometry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Atomic Absorption Spectrometry]

Introduction, Necessity of hollow cathode lamp as a source along with its working, premix chamber burner and total consumption burner, Flame atomizer – principle and working mechanism of electro-thermal atomizers, line width, different interferences observed in AAS, different methods used for background correction, fundamental difference between atomic emission and adsorption, different methods used for the analysis – standard curve method, standard addition method and internal standard method of analysis, Applications of AAS.

Unit-2 Inductively Coupled Plasma Atomic Emission Spectroscopy (15L)[14 Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Inductively Coupled Plasma Atomic Emission Spectroscopy]

Introduction, Physical and Chemical Principles, Spectrometers, Detection, Calculation, and Output, Analytical Information: Qualitative and Quantitative, Applications

Unit-3 Atomic Fluorescence Spectroscopy

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Atomic Fluorescence Spectroscopy]

Introduction, Physical and Chemical Principles, Instrumentation, Accuracy, Precision, detection Limits, Analytical Information: Quantitative, Applications

Unit-4 Mass spectrometry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Advanced mass spectrometry]

Theory and principles of mass spectroscopy, Instrumentation, low and high resolution mass spectra, Ionization techniques – Electron Impact (EI) ionization, Chemical Ionization (CI), Field Desorption (FD), Fast Ion Bombardment (FAB), Electronspray Ionization (ESI) and Matrix Assisted Laser Desorption/Ionization (MALDI). Determination of molecular weight and molecular formula, nitrogen

M.Sc. Analytical Chemistry

(15L)[14 Marks]

(15L)[14 Marks]

rule, detection of molecular ion peak, metastable ion peak. Fragmentations – rules governing the fragmentations, McLafferty rearrangement, Selected Mass analyzers- quadrupole, ion-trap, time of flight (TOF).

Core Reference Books:

- 1. "Handbook of Instrumental Techniques for Analytical Chemistry", Frank Settle, published by Prentice Hall PTR, New Jersey, 1997.
- 2. "Principles of Instrumental Analysis" by Douglas A. Skoog, 3rd Edition, Holt-Saunders International Editions.
- 3. Modern spectroscopy ,Hollas J.M., 4th edition John Wiley and sons Ltd., 2004.

Other Reference books: PCH 4852: (Theory)

- 1. "Specrochemical Analysis by Atomic Absorption and Emission", Lajunen L H J, Cambridge, UK : The Royal Society of Chemistry, 1992.
- 2. "Advances in Atomic Spectroscopy", Sneddon J, CT : JAI Press, Greenwich, 1992.
- 3. "CRC Handbook of Inductively Coupled Plasma Atomic Emission Spectrometry", Varma A, FL : CRC Press, Boca Raton, 1991.
- 4. "Multielement Detection Systems for Spectrochemical Analysis", Busch K W, Busc M A, Wiley, New York, 1990.
- 5. "Principles and Practice of X Ray Spectrometric Analysis", 2nd edition, Bertin, Eugene, Plenum Press, New York, 1975.
- 6. "An Introduction to X Ray Spectrometry", Jenkins, Ron, Heyden & Sons, London 1974.
- 7. "Principles of Quantitative X Ray Fluorescence", Tertian R, Claisse F, Heyden, London, 1982.
- 8. Introduction to Mass Spectrometry: Instrumentation, Applications, and Strategies for Data Interpretation by J. Throck Watson, O. David Sparkman, Wiley, 2007.
- 9. Interpretation of Mass Spectra by Fred W. Mc Lafferty, Turecek University Science Books, 1993.
- 10. Mass spectrometry-Principles and Applications by Edmond de Hoffmann and Vincent Stroobant, John Wiley and Sons, 2007.

Semester: 4 **Course Name: Pharmaceutical Chemistry (Theory)** No. of Credits: 04

PCH-4852 Course Code: Learning Hours: 60 Hours

Course Outcomes:

CO1: Would have basic infer of clinical biochemistry, and pathobiochemistry of different organs and various organ function tests. Would be able to estimate urea, uric acid, SGPT, SGOT and creatinine in blood serum.

CO2: To discuss and memorize the discovery of new drugs and fundamentals of various steps involved in drug development, and to know method development and its validation.

CO3: Recognize the different phases of clinical trials, role of quality control and quality assurance departments in the drug development, and to discuss about International conference on harmonization (ICH) and FDA guidelines.

CO4: To describe various components of bioanalytical methodology, various parameters related to method validation, to discuss incurred sample reanalysis, and USFDA guidelines.

Unit -1Clinical biochemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Clinical Chemistry]

Introduction to biochemical tests in clinical medicine, criteria for selecting method of analysis, pathobiochemistry of liver, kidney and cardiac diseases, organ function test-liver, kidney and heart, analysis of blood glucose, urea, uric acid, haemoglobin, complete blood count and various indices derived from it, markers for brain diseases like EEG, ECG, Isoenzymes analysis.

Unit-2 Analytical Aspects of Drug Discovery

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Analytical Aspects of Drug Discovery]

Discovery of new chemical entity, Identity and purity assessment, bioavailability/dissolution requirement, high-throughput screening, degradation and impurity analysis of drug substances, residual solvent and its classification, stability studies, pre-formulation studies, method development and validation.

Unit-3 Clinical and Regulatory Aspects of Drug Discovery

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Clinical and *Regulatory Aspects of Drug Discovery*]

Clinical trials - Phase I, II, III and IV. Quality control and quality assurance. Regulatory considerations, regulatory compliance, International Conference on Harmonization (ICH) classification and FDA guidelines, global CMC NDA.

(15L)[14 Marks]

(15L)[14 Marks]

Unit-4 Bioanalysis

(15L)[14 Marks]

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Specialized chromatographic techniques]

Components of bioanalytical methodology: extraction from biological matrices, chromatography and detection systems. Bioanalytical method validation parameters: sensitivity, selectivity, accuracy and precision, linearity (calibration curves), recovery, matrix effect and stability. Bioavailability and bioequivalence study, incurred sample reanalysis test for subject samples. USFDA guidelines for bioanalytical method validation and the acceptance criteria.

Core Reference books

- 1. "Handbook of Modern Pharmaceutical Analysis" by Satinder Ahuja and Stephen Scypinski, Volume 3, Academic Press, 2001.
- Medicinal biochemistry by rajinder Chawla and <u>Tarek H. EI Metwally</u>, United India Periodicals Pvt. Ltd. (2012)

IV. Other Reference books: PCH 4852: Pharmaceutical Chemistry (Theory)

- 1. "Handbook of Modern Pharmaceutical Analysis" (Drug and the Pharmaceutical Sciences) by Lena Ohannesian and Anthony Streeter, Marcel Dekker Inc., New York, 2001.
- 2. Quantitative Analysis of Drugs in Pharmaceutical Formulation, 3rd edition, P.D. Sethi, CBS Publishers, 2008.
- 3. Bioanalytical Chemistry by S. Mikkelsen and E. Corton, John Wiley and Sons, 2004.
- Clinical Chemistry: Principles, Procedures, Correlations, 4th edition by Michael L. Bishop, JanetL. Duben-Engelkrik, Edward P. Fody, Lippincott Williams and Wilkins, 2000.

Semester: 4 **Course Name: Advanced Analytical Instrumentation** (Theory) No. of Credits: 04

Course Code: PCH-4853

Learning Hours: 60 Hours

Course Outcomes:

CO1: Infer and memorize the theory, principle, instrumentation and the applications of various hyphenated techniques like UHPLC, SFC, LC-NMR, LC-MS and ICP-MS.

CO2: To memorize the principle, theories and instrumentation of Scanning Electron Microscopy (SEM), Scanning Tunneling Microscopy (STM) and Atomic Force Microscopy (AFM) and their industrial applications.

Unit -1UHPLC and SFC

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to UHPLC and SFC]

Principle, theory, instrumentation and applications of ultra high-performance liquid chromatography (UHPLC) and super critical fluid chromatography (SFC). Comparison with HPLC.

Unit-2 Microscopic techniques

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to microscopic techniques] Introduction to scanning electron microscopy (SEM), Scanning tunneling microscopy (STM) and atomic force microscopy (AFM); basic principles and theory; instrumentation and operating parameters and applications.

Unit-3 LC-NMR and LC-MS

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Electrophoresis] Principle, theory, instrumentation and applications of liquid chromatography-nuclear magnetic resonance and liquid chromatography-mass spectrometry. Application of LC-NMR-MS.

Unit-4 ICP-MS

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to ICP-MS]

Principle, theory, instrumentation and applications of inductively coupled plasma-mass spectrometry.

Core Reference Books:

- 1. "Quantitative Chemical Analysis" by Daniel C. Harris, 7th Edition, W.H. Freeman And Company, New York.
- 2. "Analytical Chemistry" by Gary D. Christian, 6th Edition, John Wiley and Sons Inc.New Jersey.

Reference books: PCH 4853: Advanced Analytical Instrumentation (Theory)

1. On-line LC-NMR and related techniques, Klaus Albert (editor), John Wiley and Sons, 2002.

Department of Chemistry

(15L)[14 Marks]

(15L)[14 Marks]

(15L)[14 Marks]

2. Practical Guide to ICP-MS by Robert Thomas, Marcel Dekker Inc., 2004.

3. Packed columns SFC by T.A. Berger, RSC Chromatography Monographs, RSC, 1995.

Microscopic and Spectroscopic Imaging of the Chemical State, Michael D. Morris, Marcel Dekker, Inc. (NY.).

Semester: 4 Course Name: Environmental Chemistry (Theory) No. of Credits: 04

Course Code:PCH-4854Learning Hours:60 Hours

Course Outcomes:

CO1: To explain the principles of green chemistry, microwave assisted organic synthesis, and to study in detail the green alternatives for molecular rearrangements, electrophilic aromatic substitution reactions, oxidation- reduction reaction etc

CO2: Able to gain basic information about the pollutants in air, water and soil and to describe its composition, sources, sampling and analysis through various chemical and instrumental methods.

Unit -1 Green Chemistry

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to Green Chemistry]

Principles of green chemistry, atom economy, principles of green organic synthesis, green alternatives of organic synthesis-coenzyme catalysed reactions, green alternatives of molecular rearrangements, electrophilic aromatic substitution reactions, oxidation-reduction reactions, clay catalysed synthesis, condensation reactions, Green photochemical reactions. Green Solvents: ionic liquids, supercritical CO₂, fluorous chemistry, General principles of microwave assisted organic synthesis.

Unit-2 The atmosphere

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to the atmosphere] Composition of the atmosphere, Common air pollutants and their sources, Air pollution and health, Sampling of atmospheric gases, Determination of aromatic hydrocarbons in exhaust, petrol and air, Determination of low level of carbon monoxide-catalytic conversion, Some chemical methods for determining trace gases-oxides of sulphur, oxides of nitrogen and oxides of carbon.

Unit-3 The hydrosphere

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to The hydrosphere]

The hydrological cycle and pollution, The oxygen balance in natural waters, Selected analytical methods for water quality control – pH measurement (the glass electrode), Conductivity, Dissolved oxygen (DO), Biochemical oxygen demand (BOD), Chemical oxygen demand (COD), Methods for the determination of inorganic nitrogen – ammonia, nitrate and nitrite, Determination of phosphate by colorimetric method and fluoride by ion selective electrode, Determination of chloride by titrimetry, photometric and polarographic determination of heavy metals, Trace organics in water – total organic carbon (TOC), Determination of hydrocarbons and phenols in polluted water.

Unit-4 The lithosphere and the biosphere

[Prerequisites or topics for Self Study: Basic terms and fundamental aspects related to the lithosphere and the biosphere]

(15L)[14 Marks]

(15L)[14 Marks]

(15L)[14 Marks]

Introduction, Particles size distribution in solids, Sampling problems with rocks and soils, Subsampling, Some selected chemical methods in soil analysis – pH measurements, available phosphorus, available nitrogen, total nitrogen, the nature of the biosphere, need for plant analysis, Analysis of plant tissues for N, P, K, Ca and Mg, Boron, Cobalt, Sulphur, Cold vapour and hydride generation systems in AAS, determination of mercury in urine.

Semester: 4 Course Name: Industrial/Pharmaceutical Analytical Chemistry No. of Credits: 04

Course Code: PCH-4855L

Learning Hours: 2X3 Hours

Course Outcomes:

CO1: To perform various organ function test like creatinine, uric acid and urea in blood serum.

CO2: To apply principle of Karl-Fisher titration for moisture content determination.

- CO3: To perform total organic carbon estimation in soil.
- CO4: To apply spectroscopic principles for the Structural elucidation of organic and inorganic compounds.
 - 1. Determination of moisture content in food/drug sample using Karl-Fischer titrator.
 - 2. Separation of leaf pigments of spinach leaves by TLC.
 - 3. To determine the amount of organic carbon in a given soil sample by Walkley-Black method.
 - 4. Determination of nicotine in tobacco by non-aqueous titration.
 - 5. Determination of salt iodate and salt iodide content by titration method.
 - 6. Estimation of urea in biological matrix
 - 7. Estimation of uric acid in biological matrix
 - 8. Estimation of creatinine and creatine in biological matrix
 - 9. Structural elucidation of organic and inorganic compounds using various spectral data of IR, NMR, UV-Visible and Mass spectroscopic techniques.

Semester: 4 Course Name: Dissertation/Industrial Training No. of Credits: 04

Course Code: PCH-4856L Learning Hours: 2X3 Hours

Course Outcomes:

CO1: Apply the theories and concepts learned in real-life world

CO2: Communicate and present the applications, training and experience from the industrial training

CO3: Analyse the observations from the industrial training

Industrial training for 21 days, report preparation, submission and presentation / viva
